Re: Extraction Well Waste Disposal for Camp Allen Landfill
Remedial Action, Contract #93-3032 Naval Base, Norfolk

Dear Ms. Garrett:

As we discussed yesterday, OHM can dispose of non-hazardous drill cuttings and waste solids generated from work in Area A (after characterization) with the same type of waste at Area B. The materials determined to be hazardous can be disposed with like materials through the same hauler used for Area B but must be removed directly from Area A while the non-hazardous materials can be taken directly to Area B. Development water from the well production at Area A can be treated at the onsite treatment facility located in Area B.

If you have any questions concerning this issue, please call me at (804) 322-4783.

Sincerely,

D. M. FORSYTHE
